ALFA

HONEYCOMB 

SYNCHRONICITY 

algori.com

We create the bond information network that enables all market participants to securely and intelligently harness data to make valuable financial trading connections.

In the ever-changing landscape of capital, leverage and liquidity requirements, Algomi's revolutionary technology empowers fixed income professionals to fulfil their precise needs, for both sides of the market.

By maximising the relationships between salespeople, traders and investors, Algomi's suite of scalable software greatly increases the opportunities and velocity in large and illiquid trades between banks, institutional investors and exchanges.

Algomi is innovating the way the buy side and sell side trade fixed income securities by empowering sales and trading operations.

With tenacity and integrity, Algomi unlocks the full potential of the fixed income market through pioneering and pragmatic technology.

Algomi was founded in 2012 by Stu Taylor (Former Global Head of Matched Principal Trading and creator of PIN-FI at UBS), Usman Khan and Robert Howes (Founders of CAPXD), and Michael Schmidt (Former Head of European Credit Trading and IB Board Member at UBS).

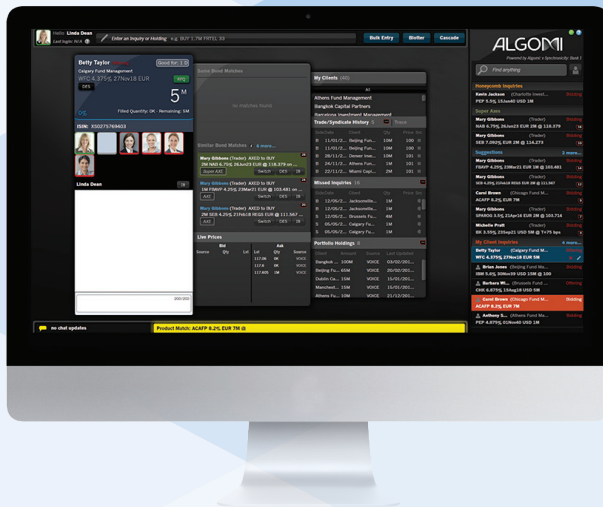

Backed by investment from Lakestar and Euronext. With an exceptional panel of Strategic Advisors, the Algomi team has grown to 140 employees with offices in New York, Hong Kong and London.

SYNCHRONICITY

For banks, Algori Synchronicity creates both a real-time internal network of salespeople and traders, and a discreet dynamic connection to their universe of investor clients and interbank parties.

Using their own data, external aggregators and other sources, Algori Synchronicity creates not only a Virtual Balance Sheet that represents the bank's true capabilities but identifies the best trade opportunities and generates efficient collaboration between traders, salespeople and their clients.

This is not a trading platform; banks can use any of their existing trading systems. We are providing the insight and connection to the Honeycomb network to help provide liquidity in the bond market.

SYNCHRONICITY

ALGOMI ALFA

For portfolio managers, investor dealers and compliance teams, Algomi ALFA provides cross-market information on liquidity and trade intent in order to give a real-time view of the entire bond market, including government bonds, investment grade, high yield, emerging market, municipal debt and structured credit.

It enables the buy side to consume data from electronic venues, messaging platforms and direct dealer inventory feeds. This can increase the likelihood of a successful trade and this has the potential to be a 'game changer' for price discovery in bond markets. The efficiency and scale achieved from comprehensive and time-stamped information is conducive to cost savings and greater alpha generation.

- Aggregating the entire market landscape into one screen, to alert users of liquidity opportunities
- More informed decision-making through capturing a range of "Liquidity Signals"
- Helping traders determine not only whether to buy or sell a security, but also when and what mode of execution
- Speed and efficiency - cut the required time to fund a new trading mandate allowing more rapid repositioning of portfolios
- Optimization of bond selection - can be better timed as a result of signals obtained through Algomi ALFA
- Providing evidence for Best Execution and TCA - an enhanced process through better data, and proof that the trade was timed correctly

The logo for ALFA, featuring the word "ALFA" in a stylized, purple, sans-serif font. The letters are bold and have a modern, geometric feel.

HONEYCOMB

For portfolio managers, investor dealers and compliance teams, Algori Honeycomb turns complex data systems into actionable knowledge.

Helping investors trade with increased speed and success, capturing the heartbeat of the world's trading floors, Honeycomb provides the data and market insight vital to selecting the right banks and the right time to trade.

The investor is able to deal in size, seek best execution, and remain discreet in the market while the banks use their large distribution network.
